A: I have now installed ESXi 5.1 in a VMware Virtual Machine (VMWare Workstation) and also in a Virtual Machine created with VMware Player (ESXi). I have tested the full version in both scenarios. To install ESXi in a Virtual Machine created with VMware Player Download the.iso file. Insert the downloaded.iso file into your USB. Create a virtual machine. In the

options, select VMware Player. Select your virtual machine and VMware Player. Select ESXi and your virtual machine. In the next screen, select the hard disk of the.iso file. In the next screen, select a name for the virtual machine and install ESXi. Select Continue to reboot the VM. To install ESXi in a virtual machine created with VMWare Workstation Download the.iso file. Insert the downloaded.iso file into your USB. Create a virtual machine.
