1. Field of the Invention The present invention relates to a machine tool, more specifically a machine tool in which a

feeder can be installed to which are connected an additional tool changer and a tool magazine, a controller of the machine tool, a computer with which the controller is connected, a programmable process control system which is connected to the controller by way of the computer and which controls the operation of the machine tool, and a process system for a tool changer for a machine tool to which is connected a feeding apparatus with which the tool changer, a tool magazine connected to the tool changer and a tool changer controller are connected. 2.

Description of the Prior Art A feeding apparatus is known by the name Foodini, an apparatus which is also known from EP 099

458 and is used for feeding an end-milling cutter, called a special milling cutter in the description hereinafter. A tool changer, a tool magazine and a tool changer controller together with a computer are connected to the feeding apparatus and form an intelligent, flexible system which can be combined with an end-milling cutter with automatic tool changing. The known feeding apparatus has a cylindrical tube in which are installed rod-shaped tools. The tube is opened at one end by an operator, said end being located opposite the feeding apparatus. The tools are moved to the other end of the tube by a feeding apparatus. The feeding apparatus has a pair of driving pulleys to which the tools

are attached by means of a gripping system. The driving pulleys are driven by a driving motor through a driving belt. The shaft of the driving motor is connected to the shaft of the feeding apparatus by

Magnet importer is a small, high-quality, powerful and fully-featured magnet importer for any version of MS Windows. The core functionality of the magnet importer is to be able to import the complete database via a set of parameters. The user interface of the magnet importer is almost as intuitive as the regular MS SQL Server-provided import wizard and allows you to navigate the database objects and file structures just as you do in any other file manager or database manager. The import wizard is integrated in the default Explorer interface with all file operations. You can open the database objects and view the structure of the

database in the tool's Explorer interface. The wizard allows you to import database objects of any type. It also supports the import of database tables, including all sort of database constraints, foreign keys and primary keys. The structure of data types, indexes, primary keys, foreign keys, sequences and constraints can be modified, including the creation of the default structure. The import wizard can export the database as a Microsoft Access, Microsoft Excel, Microsoft Word, plain text
