Go to "Export for line" Again select "Save for autocad" and save the file in your hard drive. This file contains the coordinates that are used to draw the line, called "Define". Copy all the files and folders from your Autocad installation to the "temp" folder. Then open a command prompt and type this command: Type in the following command: Copy and paste the "define.pli" file into the "temp" folder you just created, and then close the command prompt. In the Autocad, go to File -> Import. Choose the .pli file that you just created. Click on "Open". Markup Import and Markup Assist Importing feedback from printed paper or PDFs and adding your comments directly to your drawing means you'll have the latest information available and your drawings are always up to date. Just import the paper, PDF or image into your CAD application. And if it's not a single page, AutoCAD will scan the entire page for feedback. Then you can mark-up the drawing, annotate, or add notes in comments. With just a few clicks, AutoCAD will merge your new comments into your drawing automatically. Comments will be applied as you mark them up, so you'll know they're current as you continue to work on your drawing. The feedback is not added to your drawing or file as a comment but instead it's saved in the Global Draw object and is available to be viewed, modified or annotated, just like any other object. You can add markup to multiple PDFs or images at once. And you can use the printed paper to mark up multiple drawings. When you're finished with the feedback, you can export it to a PDF or email it directly to the person who provided the comments. "Being able to add comments to drawings using feedback from printed paper or PDFs means you'll always have the most up-to-date information available to you," says Tom Wark, product marketing manager at Autodesk. "Also, if a customer or end user sends you the paper, PDF or image, you can mark up the drawing for them, right then and there. They get the latest information and they never have to worry about whether they have the latest version of the drawing or if the information will be outdated." Quick and Easy: 1. Import the feedback to your drawing.
