The sun sets behind the Chappel End and North bars in the Brecon Beacons on July 30, 2020 in Powys, Wales. THE SCENE: A 20-year-old (n) has been charged with breaching lockdown rules after a Facebook Live video was found showing him driving near his home in Carmarthenshire in the West Wales area of Carmarthenshire in March. PHOTO | PA P.J.11

Feynman on the Tits-Vandermonde Theorem - fogus ===== pmjordan  
\_I came up with a Tits - Vandermonde identity ( Tits-Vandermonde\_identity), and was interested to find an example of it applied to numbers. This was not enough to work out the correct form; the arithmetic itself was easy, but it turned out to be a harder problem to be able to express the answer in standard scientific notation. However, I have no interest in the identity itself; I just happened to be playing around with dealing with irrational numbers and noticed that the Tits-Vandermonde identity makes the problem trivial. \_I'd say that's a somewhat faulty argument: as you say, \_there isn't even a need\_ to obtain the Tits-Vandermonde identity to prove the RSA problem, so the identity wasn't enough to prove the correct solution, even to him. However, the fact that this identity has been proved is a nice and simple proof, and I think it's a fine example of his carefulness and his representative biographer's efforts to reconstruct his thought processes. Incidentally, I'm surprised noone (besides wikipedia) has mentioned that we can actually solve an "extension" of the RSA problem in a similar way to the RSA problem, namely: \_guess the prime factorization of N\_ from the public part of the public-private key pair. ~~~ gvwengert From a quick look, it appears that the problem was solved in a couple hours and that the mathematician he was talking about didn't try for "scientific notation" at
